AIR POLLUTION MANUAL

exclusively prepared for

THE FOUNDRY INDUSTRY

In the eyes of the public, the Foundry Industry is a major source of Air Pollution! Yet, in a comparison with other basic industries, less equipment is needed by the foundry industry to reduce pollution of the air by contaminants than in the others.

In the light of existing conditions, the Foundry Industry's major problem is to have technically accurate information for controlling air pollution in specific operations and locales.

Only in this way can Foundry Operators proceed with confidence in establishment of community relations and development of laws, equally compatible for industrial and residential acceptance.

This **AIR POLLUTION MANUAL**, written by men of the foundry field for the foundry field, will enable management to move forward with confidence . . . not only in the selection and maintenance of suitable equipment but, equally important, in compliance with "good neighbor" policies.

Comprehensive sections cover:

1. Foundry Industry's Air Pollution Problem
2. Review of Existing Ordinances
3. Community Relations
4. Atmospheric Sampling and Analysis
5. Air Cleaning Equipment
6. Operating Methods, Improvements and Maintenance

Here, at last, is a book that will enable Foundry Management to *know* how to correct the air pollution problem as it affects their plant and their community interests. Order your copies of the **AFS AIR POLLUTION MANUAL** today!
